Materials in Biology and Medicine 1st Edition Sunggyu Lee, David Henthorn October 12, While the interdisciplinary field of materials science and engineering is relatively new, remarkable developments in materials have emerged for biological and medical applications, from biocompatible polymers in medical devices to the use of carbon nanotubes as drug delivery vehicles. Abstract There is a demand for new chemical reaction technologies and associated engineering aspects due to on-going transition in energy and chemistry associated to moving out progressively from the use of fossil fuels. Aqueous biphasic catalysis: where the reaction takes place. Scheme8. The hydrogenation takes place in an aqueous phase that is in contact with a solid ruthenium catalyst. Waste to chemicals for a circular economy.
