The size of a BLEVE depends upon the weight of the container pieces and upon how much liquid vaporizes when the container fails. Blast wave: A shock wave in open air generally followed by strong wind, the combined shock and wind is called blast wave. There have also been instances where release from one storage vessel has led to a fire which has caused BLEVE of an adjacent one such as the case at Texas city, Texas inwhere overfilling of an LPG sphere led to a fire which caused the BLEVE of an adjacent sphere Explosion Hazards in the Process Industries resulted the death of 7 and injury of 10 people.
